

Fisher® POSI-SEAL™ A11 High-Performance Butterfly Valve

The Fisher A11 High-Performance Butterfly Valve maintains tight shutoff, and can be specified for a wide range of pressure and temperature conditions, including cryogenic applications.

The A11 valve is available in either a wafer or a single-flange design (single-flange only for CL600, 900, and 1500). A square or keyed shaft can combine with a variety of handlevers, handwheels, or pneumatic piston diaphragm actuators. A splined shaft can combine with a variety of spring-and-diaphragm or pneumatic piston actuators. These combinations help make the A11 valve a reliable, high-performance butterfly valve for both throttling and on-off applications in the process industries.

The A11 valve can be supplied with one of several dynamic seals (figure 1) that can be used in a variety of demanding applications. With the appropriate seal selection and materials of construction, the pressure-assisted seal helps provide excellent shutoff against the full ASME class pressure range for the A11 valve.

Features

- **Shaft Versatility**—This valve will meet your actuator needs with a choice of square, keyed, or splined shaft connections.
- **Excellent Shutoff Integrity**—The pressure-assisted seal design provides tight shutoff and permits the use of smaller, less expensive actuators in applications requiring full ASME B16.34 shutoff capabilities.

W9570-1

- **Excellent Emissions Capabilities**—The optional ENVIRO-SEAL™ packing systems are designed with very smooth shaft surfaces and live-loading to provide improved sealing, guiding, and loading force transmission. The seal of the ENVIRO-SEAL system can control emissions to below 100 ppm (parts per million).
- **Sour Service Capability**—Trim and bolting materials are available for applications involving sour liquids and gases. These constructions comply with NACE MR0175-2002, MR0103, and MR0175 / ISO 15156.
- **High-Temperature/Cryogenic Capabilities**—Optional valve constructions allow this valve to meet both high-temperature and cryogenic applications (see table 7 for cryogenic and high-temperature actuator configurations).
- **Easy Installation**—The valve body self-centers on the line flange bolts as a fast, accurate means of centering the valve in the pipeline.

Features (continued)

- **Reliable Flange Gasketing Surface**—Seal retainer screws are located so there is no interference with the sealing function of either flat sheet or spiral wound line flange gaskets.
- **True Bidirectional Shutoff Performance**—A feature of the valve design is that the torque necessary to open and close the valve is the same regardless of the direction in which the differential pressure is applied.
- **Ease of Maintenance**—Interchangeability of all parts, including shafts and discs, simplifies service and reduces maintenance costs.

Standard Seal Configurations

- **Standard Soft Seal (PTFE CL150 and 300, and ETFE CL600, 900, and 1500)**—A resilient dynamic seal

with an elastomeric back-up ring for low to moderate temperature applications.

- **Metal Seal**—This stainless steel seal is available for severe service and high-temperature applications to 704°C (1300°F) for NACE applications and 816°C (1500°F) for other applications.
- **NOVEX Seal**—The NOVEX stainless steel seal is available for severe service, Cryogenic, and high-temperature applications to 816°C (1500°F). Available for CL150/150, 150, and 300, up to NPS 36 only.
- **Phoenix III Seal**—This three-component, metal-and-polymeric seal is available for severe service with low to moderate temperature applications.
- **High-Pressure Seal (CL600, 900, and 1500)**—This robust, stainless steel seal is available for severe service, cryogenic, and high-temperature applications to 704°C (1300°F), for NACE, and for other applications to 816°C (1500°F).
- **Cryo-Tight Cryogenic Seal**—This resilient dynamic seal is available with or without an aluminum back-up ring for low temperature applications.

1. Refers to a valve construction consisting of a CL150 body and trim suitable for a shutoff pressure drop of 150 psid.

End Connection Style

Flangeless or single flange style designed to fit between raised-face mating flanges of appropriate class pressure rating

ASME B16.5

NPS 3 through 24: CL600

NPS 6 through 24: CL900

NPS 10 through 20: CL1500

ASME B16.47 Class A and MSS-SP-44

NPS 30 through 48: CL150, 300, and 600

NPS 30 through 36: CL900

Consult your Emerson Process Management sales office for valves compatible with API 605 and ASME B16.47 Class B flanges

Maximum Inlet Pressure⁽¹⁾

Valve Body: Consistent with CL150, 300, 600, 900, and 1500 pressure/temperature ratings per ASME B16.34, see table 17

Seal: see figure 1

Materials of Construction

See table 1

Disc Hard Surfacing: All CL600, 900, and 1500 disc edges must be coated, regardless of the seal type. Metal, NOVEX, Phoenix III and cryogenic seals require the disc to be coated, regardless of the valve class.

Maximum Temperature Capabilities⁽¹⁾

See table 1

High-Temperature and Cryogenic Applications: See table 7 for available valve and actuator combinations

Shutoff Classification per ANSI/FCI 70-2 and IEC 60534-4

Standard Soft Seal: Bubble-tight shutoff (exceeds Class VI)

Metal Seal: 20% of Class IV (reverse direction only)

NOVEX Seal: Standard Class V (Class VI optional, reverse direction only)

Phoenix III Seal: Bubble-tight (reverse direction only), Class VI (forward direction only)

High Pressure Seal: Standard Class V (Class VI optional, reverse direction only)

Cryogenic Seal (Reverse direction only): NOVEX: Class VI

CTFE: 10% of Class IV

CTFE with Aluminum Backup Ring: Class VI

Flow Characteristic

1. The pressure/temperature limits in this bulletin, and any applicable code or standard limitation, should not be exceeded.

Figure 1. Available Seal Configurations

E0578

Notes:

- ① This unidirectional seal must be installed so that the retaining ring is downstream from the high pressure side of the valve at shutoff, as shown.
② For this bidirectional seal, the "preferred" valve orientation places the retaining ring downstream from the high pressure side of the valve at shutoff.

Installation

Preferred valve orientation for the A11 valve is reverse flow direction. Reverse flow direction is into the side of the valve body opposite the retaining ring or into the shaft side of the disc.

For erosive and many severe service applications, valves with bidirectional seals can and should be installed with the shaft horizontal and in the forward flow direction to prevent direct impingement of the process media on the seal, and to minimize the exposure of the shaft bearings to the process media.

The standard soft seal and the Phoenix III seal both offer bidirectional shutoff. Valves using either metal, NOVEX, or cryogenic seals are unidirectional and must be installed in the reverse flow orientation.

For assistance in selecting the appropriate combination of actuator action and open valve position, consult your Emerson Process Management sales office.

Dimensions and weights for wafer-style and single-flange valves are shown in figures 3, 4, 5, 6, and 7.

	Square Ring Graphite for Oxidizing Service	-254 to 538	-425 to 1000
	Square Ring Graphite for Non-oxidizing Service	-254 to 816	-425 to 1500
	Graphite ENVIRO-SEAL	-140 to 315	-325 to 600

1. Special gasket retainer bolts are required for over 538°C (1000° F).
 2. Special retaining ring screws for single flange valves over 538°C (1000° F).
 3. Special thrust bearings are required for high temperature applications over 343°C (650° F) (with 6 and 12 inch extensions). Constructions with carbon steel valves and SST discs may require special thrust bearings at temperatures greater than 343°C (650° F).
 4. Special option; contact your Emerson Process Management sales office.
 5. For valves NPS 30 and larger at temperatures over 254°C (450° F), the disc material should be the same as the valve body material.

Table 2. Temperature Limits for Metal Seal

SEAL TYPE	PRESSURE RATING	SEAL MATERIAL	MAXIMUM TEMPERATURE LIMITS		BACKUP RING
			°C	°F	
Metal	CL150/150, and 150 ⁽²⁾	S31600 w/ CF8M disc S31600 w/ WCC disc ⁽²⁾	538 232	1000 450	No
	300	S31600 w/ CF8M disc S31600 w/ WCC disc ⁽²⁾	816 232	1500 450	No
	600 ^(1, 2)	S20910 NACE w/ CF8M disc S20910 w/ WCC disc	649 232	1200 450	No
		S17400 H1150M w/ CF8M disc S17400 H1150M w/ WCC disc	232 427	450 800	No

1. When used with CF8M discs, S20910 is the preferred seal material. When used with WCC discs, S17400 H1150M is the preferred material.
2. For valves with WCC discs at temperatures over 254°C (450°F), contact your Emerson Process Management sales office for seal material selection.

Pressure Drops

Pressure drop limits of any given valve are based on valve body, and trim material limits. To find the appropriate pressure drop limitation, choose the desired valve size and temperature range. Then search

table 17 for body limitations and tables 18, 19, 20, and 21 for trim limitations. Information on limits for S31254, CW2M, M35-1 and other alloy constructions can be obtained by contacting your Emerson Process Management sales office. The lowest number from the tables is the appropriate limit. **The tables for both trim and body limits must be consulted.**

1. Consult your Emerson Process Management sales office if higher pressure drops are required.
2. Consult Fisher bulletin 59.3:042 (D102093X012) for packing selection guidelines regarding pressure/temperature limits.
3. Trim 514H with optional N07718 shaft.
